

Andrew Schneider

Experienced Frontend Engineer • React & TypeScript • Ex-Gemini, Blockchain.com, Target

andrew.mark.schneider@gmail.com • 715-220-2661 • Charlotte, NC • schnogz.xyz • linkedin.com/in/andrewmarkschneider

PROFILE

Frontend engineer with 14 years across startups and enterprises (Gemini, Blockchain.com, Target, Thomson Reuters). I have built consumer fintech apps used by 100M+ people, checkout and payment flows, developer SDKs, GraphQL and REST integrations, component libraries, and browser extensions. Have led teams of 20+ and still ship code every day.

SKILLS

Languages: TypeScript • JavaScript • HTML • CSS/SASS • SQL • NoSQL • Python

Frontend: React • Angular • Next.js • Vite • Redux • Redux Saga • Zustand • React Native • Tailwind • Styled Components • GraphQL • WebSockets

Testing & Tooling: Vitest • Jest • Storybook • Turborepo • GitHub Actions • WebAuthn/Passkeys • accessibility (WCAG, Section 508)

Backend (working): Node.js • NestJS • Express • REST & GraphQL APIs • PostgreSQL • MongoDB • Redis

Infra / DevOps: AWS • GCP • Azure • Docker • Kubernetes • Datadog • Grafana • Sentry • Snyk

EXPERIENCE

Founder & Sole Engineer | Breakcastr

May 2026 – Present

Charlotte, North Carolina

- Built and operate a live-broadcast SaaS for sports card breakers, from first commit to production on AWS: professional stream overlays and one-click broadcast controls.
- Split the frontend across subdomains by what each surface needs: Next.js for the marketing site and dashboard, Vite + React for the low-latency studio app and the overlay that renders inside OBS.
- One Tailwind component library powers every app. Behind it sits a NestJS REST API with a WebSocket relay for live broadcast state. Services ship as Docker images to ECS, Lambda covers serverless jobs, and Stripe handles subscriptions.

Staff Software Engineer | Gemini

Dec 2024 – Feb 2026

New York City Metropolitan Area (Remote)

- Led 3 engineers shipping a smart account crypto wallet in React, Next.js, and TypeScript, now used by thousands of people. Security-critical UI where a mistake costs users real money.
- Built passkey (WebAuthn) authentication so onboarding works like Face ID, with no seed phrase for the user to write down.
- Shipped onchain.gemini.com (React/Next.js): lending, swaps, payments, and NFT portfolios. The lending flows alone brought in \$5M+ in deposits.
- Designed an open-source TypeScript SDK for third-party developers that hides three vendor integrations behind one documented interface.
- Owned the shared component library, developed and documented in Storybook and used across the wallet and dapp.

Lead Engineer / Engineering Manager | Dispatch

Aug 2022 – Oct 2024

New York City Metropolitan Area (Remote)

- Managed 4 engineers and stayed technical lead for checkout and payments.
- Built checkout and payment workflows in React over GraphQL, wiring Shopify, Salesforce, and BigCommerce storefronts into Stripe, Adyen, and PayPal.
- Wrote Apple Pay and Google Pay integrations by hand (session creation, cryptogram decryption to alias PAN, token submission) because off-the-shelf options could not run inside ad embeds.
- Designed the GraphQL schemas and resolvers behind the checkout APIs, and picked up wider backend work (NestJS, Redis, MongoDB, REST endpoints), containerized with Docker on Azure, when features needed it.

Head of Web Engineering

Feb 2020 – Aug 2022

- Ran web engineering, 20+ engineers on 3 teams, for consumer products serving 100M+ users. Set the standards and technical direction.
- Architected company-wide SSO, a Chrome extension wallet, and the shared component library every web product used, developed and documented in Storybook. React, TypeScript, Styled Components.
- Hired across all three teams and grew the org; owned products beyond the wallet, including the block explorer and the company's other internal and external web apps.
- Drove the JavaScript-to-TypeScript migration across every web codebase.

Front End Team Lead

Jun 2019 – Feb 2020

- Led a team of 5–7 engineers building the app features that mattered most: identity verification (KYC), Buy/Sell, and two major protocol upgrades. React, Redux, Redux-Saga.
- Owned architecture decisions, release coordination, and planning.
- Mentored engineers and handled production incidents as part of the on-call rotation.

Senior Front End Engineer

Feb 2018 – Jun 2019

- Core contributor to the flagship web wallet, one of the most used self-custody financial apps on the web (React, Redux, Redux-Saga).
- Led major feature launches, including Ledger hardware support in the browser.
- Worked on security-sensitive flows like private key handling, 2FA, and recovery phrases, and improved wallet load performance.

Senior Front End Engineer | Target

Sep 2016 – Feb 2018

Minneapolis, Minnesota

- Led frontend on several digital asset management apps in Angular and React.
- Automated CI/CD for the team microservices with Drone, Docker, and Kubernetes. Mentored junior developers.

Thomson Reuters

Jan 2012 – Aug 2016

Eagan, Minnesota

Senior Software Engineer

Nov 2014 – Aug 2016

- Cobalt Platform frontend team. Co-wrote the JavaScript style guide and testing standards adopted across the org.
- Led frontend on BPM proof-of-concept apps in Angular and Ember.

Software Engineer

Jan 2012 – Nov 2014

- Supported WestlawNext and the Cobalt Platform: ESLint adoption and cleanup, test migrations to QUnit/Jasmine, i18n, and moving builds from Ant to Node.js.

OPEN SOURCE & PROJECTS

- **Gemini Wallet Core SDK** — Open-source, fully typed TypeScript SDK for Gemini's smart account infrastructure.
- **iTerm2 Crypto Stats** — Custom status bar components with live market data.
- **Songkick API Wrapper** — Full Node.js wrapper for the Songkick concert API.
- **Personal Website** — schnogz.xyz — built with React and Gatsby.

EDUCATION**B.S. Information Systems, Cum Laude** | Minnesota State University, Mankato

2007 – 2011
