

Andrew Schneider

Fullstack Software Engineer (Frontend Leaning) • React, Node.js & TypeScript • Founder, Ex-Gemini & Blockchain.com

andrew.mark.schneider@gmail.com • 715-220-2661 • Charlotte, NC • schnogz.xyz • linkedin.com/in/andrewmarkschneider

PROFILE

Fullstack engineer with 14 years of experience: React/Next.js frontends, Node.js/NestJS services with REST and GraphQL APIs, PostgreSQL/MongoDB/Redis, and AWS infrastructure as code. Most recently built and launched a SaaS platform solo. Before that, led teams of up to 20+ at Gemini and Blockchain.com while continuing to ship. Strong in payments, authentication, and developer SDKs.

SKILLS

Languages: TypeScript • JavaScript • SQL • NoSQL • Python • HTML • CSS/SASS

Frontend: React • Next.js • Vite • Redux • Redux Saga • Zustand • GraphQL • React Native • Tailwind • Storybook • Vitest • Turborepo

Backend: Node.js • NestJS • Express • Django • REST APIs • GraphQL • WebSockets • Stripe SDK • WebAuthn/Passkeys

Data: PostgreSQL • MongoDB • Redis • DynamoDB

Cloud / DevOps: AWS (CDK, ECS, Lambda, ALB, S3, CloudFront, SES, Amplify) • GCP • Azure • Docker • Kubernetes • GitHub Actions • Datadog • Grafana • Sentry • Snyk

EXPERIENCE

Founder & Sole Engineer | Breakcastr

May 2026 – Present

Charlotte, North Carolina

- Built and still operate the entire platform: a live-broadcast SaaS that gives sports card breakers professional overlays and one-click controls to turn a webcam stream into a real broadcast.
- Architected the frontend as separate apps per subdomain: Next.js for the marketing site and dashboard, and Vite + React for the studio app and the live overlay that renders inside OBS, all sharing one Tailwind component library.
- Built the backend as a NestJS REST API on MongoDB, with Redis handling sessions and rate limiting and a WebSocket relay pushing live broadcast state to every client. Subscription billing runs through Stripe.
- Defined every piece of infrastructure as code with AWS CDK: Dockerized services on ECS behind an ALB, Lambda for serverless functions, S3, CloudFront, SES, and Amplify, with deploys running through GitHub Actions.

Staff Software Engineer | Gemini

Dec 2024 – Feb 2026

New York City Metropolitan Area (Remote)

- Led 3 engineers building a smart account crypto wallet: React/Next.js client, TypeScript SDK, Node.js service layer. Took it from architecture to production; thousands of users.
- Built a Dockerized Node.js reverse proxy and SDK layer that puts three infrastructure vendors (Coinbase, Pimlico, Gelato) behind one interface, so the wallet gets gas sponsorship and routing without vendor lock-in.
- Made passkeys (WebAuthn) the wallet native signing mechanism. No seed phrases anywhere in the product.
- Shipped onchain.gemini.com (React, Next.js, wagmi/viem) for lending, swaps, and portfolio management. Lending deposits passed \$5M. Open-sourced the companion SDK.
- Maintained a shared Storybook component library used across the wallet and dapp.

Lead Engineer / Engineering Manager | Dispatch

Aug 2022 – Oct 2024

New York City Metropolitan Area (Remote)

- Managed 4 engineers and stayed technical lead across web and backend.
- Built checkout and payment workflows in React over GraphQL, wiring Shopify, Salesforce, and BigCommerce storefronts into Stripe, Adyen, and PayPal.
- Wrote the Apple Pay and Google Pay integrations: session creation, cryptogram decryption to alias PAN, and token submission to the gateways.
- Built the backing services in NestJS, Redis, and MongoDB, running in Docker containers on Azure, and designed the GraphQL schemas and resolvers they exposed.

Blockchain.com

Feb 2018 – Aug 2022

New York City Metropolitan Area

Head of Web Engineering

Feb 2020 – Aug 2022

- Ran web engineering: 20+ engineers, 3 teams, products at 100M+ wallet scale. Set the standards and technical direction.
- Architected company-wide SSO, a browser-extension wallet, and a shared component library built in Storybook. React, TypeScript, Styled Components.
- Hired and grew the org across three teams; scope covered the wallet, the block explorer, and the company's other web apps.
- Pushed the web codebases from JavaScript to TypeScript.

Front End Team Lead

Jun 2019 – Feb 2020

- Led a team of 5–7 engineers delivering KYC, Buy/Sell, the Bitcoin SegWit upgrade, and ERC-20 support in the web wallet (React, Redux, Redux-Saga).
- Mentored engineers on the team and took on-call for wallet production incidents.

Senior Front End Engineer

Feb 2018 – Jun 2019

- Core contributor to the non-custodial web wallet. Led ERC-20 support and the Ledger hardware integration.
- Worked on security-sensitive flows (key handling, 2FA, recovery phrases) and improved wallet load times.

Senior Front End Engineer | Target

Sep 2016 – Feb 2018

Minneapolis, Minnesota

- Led frontend for digital asset management apps: Angular and React over Java Spring Boot, Go, Kafka, Python, and MongoDB services on GCP.
- Automated CI/CD for every team microservice with Drone, Docker, and Kubernetes. Mentored junior engineers.

Thomson Reuters

Jan 2012 – Aug 2016

Eagan, Minnesota

Senior Software Engineer

Nov 2014 – Aug 2016

- Cobalt Platform frontend team. Co-wrote the JavaScript style guide and testing standards, and led frontend on BPM proof-of-concept apps.

Software Engineer

Jan 2012 – Nov 2014

- Supported WestlawNext and the Cobalt Platform: ESLint adoption, QUnit/Jasmine test migrations, i18n, and moving builds from Ant to Node.js.

OPEN SOURCE & PROJECTS

- **Gemini Wallet Core SDK** — Open-source, fully typed TypeScript SDK for Gemini's smart account infrastructure.
- **Blockchain.com Wallet Decrypter** — Node.js CLI that extracts and decrypts wallet payloads from a Blockchain.com GUID.
- **Songkick API Wrapper** — Full Node.js wrapper for the Songkick concert API.
- **Personal Website** — schnogz.xyz — built with React and Gatsby.

EDUCATION

B.S. Information Systems, Cum Laude | Minnesota State University, Mankato

2007 – 2011
